

Mill finish aluminum roll jacketing

Product Description

Mill finish aluminum roll jacketing is a very popular finish, many end-users who prefer the clean look of this finish. This finish sheds rain water the best. However this smooth surface readily shows damage such as from hail or other physical abuse. It also shows the dirt more than the other finishes due to its smoothness. Lastly, it is highly reflective of sunlight, and when located near roadway, some specifiers see this reflection as a possible safety hazard.

Specification:

Alloy: 1100, 1200, 3003, 3105

Temper: H14, H16, H24, H26

Thickness: 0.4mm--1.5mm

Standard width: 914mm, 1000mm, 1200mm, 1219mm

Surface: mill finish, stucco embossed (orange peel), corrugated

Inner diameter: 305mm, 405mm, 505mm, with paper core, or without core

Out diameter: According to coil weight and finish, most common coils length: 125m, 150m, 250m, 300m, 500m, 1000m, 2540m

Surface lamination: mill finish

Quality standard: ASTM B209, EN573-1

Quantity: have ready stock for most common thickness roll, small quantity order are acceptable.

Application :

1. Standard outdoor use on all pipe, vertical tank insulation systems up to 8 ft outer diameter, and all horizontal tanks.
2. Indoor insulation system applications up to 8ft outer diameter where increased damage resistance is desired.
